EDUCATION

Virtual University of Pakistan
Bachelor of Science in Computer Science

Karachi, Pakistan
April 2021 – June 2025

EXPERIENCE

Junior Software Engineer
Heptic.it

July 2025 – Present
Remote

- Engineered backend APIs serving core web platform features with structured validation, cutting data inconsistencies in production and improving reliability across high-traffic workflows.
- Implemented i18n across front-end interfaces, expanding platform reach to multiple locales and reducing locale-related bug reports by eliminating hardcoded string dependencies.
- Maintained Git-based version control and CI/CD pipelines across agile sprint cycles, enabling consistent, zero-downtime feature delivery in a fully remote cross-functional team.
- Drove technical SEO implementation across semantic markup, metadata pipelines, structured data, and performance-optimized rendering, improving page quality scores and organic discoverability.
- Integrated payment gateways (Stripe/PayPal) into production web platforms, enabling secure multi-currency transactions and reducing checkout failure points

PROJECTS

Employee Attendance & Leave Management System | *Python, FastAPI, Next.js, PostgreSQL, Docker* 2026

- Built a full-stack web application with Next.js frontend and FastAPI backend, delivering a responsive multi-role interface for attendance tracking and leave workflows
- Engineered role-based access control and analytics dashboards serving multiple user roles with real-time data
- Containerized with Docker Compose for zero-drift deployments, achieving sub-100ms API response times across all operations
- Designed data ingestion pipelines and reporting workflows on PostgreSQL, supporting complex multi-role querying at scale

Inventory & Billing Management System | *Python, PyQt, SQLite, Pandas* 2025

- Built an Excel-to-SQLite ETL pipeline using Pandas, automating BOM generation and invoice creation from a centralized inventory database
- Designed a normalized relational schema supporting multi-table queries across inventory, billing, and reporting workflows
- Eliminated manual data entry workflows, reducing processing time and improving billing accuracy across operations

CERTIFICATIONS

Google Cloud Associate Cloud Engineer | *Google* 2025

- Validates hands-on proficiency in cloud architecture, IAM, networking, storage, hosting environments, and monitoring

Oracle Cloud Infrastructure Foundations Associate | *Oracle* 2025

- Demonstrates understanding of core cloud services, security, and scalable cloud architecture fundamentals

McKinsey Forward Program | *McKinsey & Company* 2025

- Certified in business leadership, professional communication, and project management in high-growth environments

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, HTML/CSS
Frameworks: React, Next.js, FastAPI, Astro.js
DevOps: Git, Docker, Google Cloud Platform, Linux
Design & UX: Figma, Canva, Wireframing, Responsive Design
SEO & Analytics: Google Analytics 4, Technical SEO
